

APR 28 2000

**DISTRICT OF COLUMBIA  
DEPARTMENT OF INSURANCE AND SECURITIES REGULATION**

**NOTICE OF FINAL RULEMAKING**

The Commissioner of the Department of Insurance and Securities Regulation, pursuant to the authority set forth in section 28 of Chapter 5 of the Life Insurance Act, approved June 19, 1934 (48 Stat. 1125, D.C. Code § 35-534 (1997 Repl.)), as added by §3 (h) of the Life Insurance Amendments Reform Act, effective March 14, 1985 (D.C. Law 5-160, D.C. Code § 35-534) and the authority set forth in section 4 of the Department of Insurance and Securities Regulation Establishment Act of 1996, effective May 21, 1997 (D.C. Law 11-268, D.C. Code § 35-123), (1997 Repl.) hereby gives notice of the adoption of a new Chapter 30, Valuation of Life Insurance Policies to Title 26 DCMR (Insurance). These regulations will provide: (1) tables of select mortality factors and rules for their use; (2) rules concerning a minimum standard for the valuation of plans with nonlevel premiums or benefits; and (3) rules concerning a minimum standard for the valuation of plans with secondary guarantees.

Notice of Emergency and Proposed Rulemaking was published in the D.C. Register at 47 DCR 1266 (February 25, 2000). No comments were received. The emergency rules were adopted on January 1, 2000 and became effective on that date. This final rulemaking will be effective when published in the D.C. Register.

26 DCMR is amended by adding a new Chapter 30, Valuation of Life Insurance Policies, to read as follows:

**Chapter 30**

**Valuation of Life Insurance Policies**

**3000      Applicability**

3000.1      These regulations shall apply to all life insurance policies, with or without nonforfeiture values, issued on or after the effective date of this regulation, subject to exceptions and conditions set forth in these rules.

3000.2      These regulations shall not apply to:

- (a)      Any individual life insurance policy issued on or after the effective date of this regulation if the policy is issued in accordance with and as a result of the exercise of a reentry provision contained in the original life insurance policy of the same or greater face amount, issued before the effective date of this regulation, that guarantees the premium rates of the new policy.

APR 28 2000

**3001 General Calculation Requirements for Basic Reserves and Premium Deficiency Reserves**

- 3001.1 At the election of the company for any one or more specified plans of life insurance, the minimum mortality standard for basic reserves may be calculated using the 1980 CSO valuation tables with select mortality factors (or any other valuation mortality table adopted by the National Association of Insurance Commissioners after the effective date of this regulation and promulgated by regulation by the commissioner for this purpose). If select mortality factors are elected, they may be:
- (a) The ten-year select mortality factors incorporated into the 1980 amendments to the National Association of Insurance Commissioners Standard Valuation Law;
  - (b) The select mortality factors in the Appendix; or
  - (c) Any other table of select mortality factors adopted by the National Association of Insurance Commissioners after the effective date of this regulation and promulgated by regulation by the commissioner for the purpose of calculating basic reserves.
- 3001.2 Deficiency reserves, if any, are calculated for each policy as the excess, if greater than zero, of the quantity A over the basic reserve. The quantity A is obtained by recalculating the basic reserve for the policy using guaranteed gross premiums instead of net premiums when the guaranteed gross premiums are less than the corresponding net premiums. At the election of the company for any one or more specified plans of insurance, the quantity A and the corresponding net premiums used in the determination of quantity A may be based upon the 1980 CSO valuation tables with select mortality factors (or any other valuation mortality table adopted by the National Association of Insurance Commissioners after the effective date of this regulation and promulgated by regulation by the Commissioner). If select mortality factors are elected, they may be:
- (a) The ten-year select mortality factors incorporated into the 1980 amendments to the National Association of Insurance Commissioners Standard Valuation Law;
  - (b) The select mortality factors in the Appendix of this chapter;
  - (c) For durations in the first segment, X percent of the select mortality factors in the Appendix of this chapter, subject to the following:
    - (1) X may vary by policy year, policy form, underwriting classification, issue age, or any other policy factor expected to affect mortality experience;

DISTRICT OF COLUMBIA REGISTER

APR 28 2000

resulting from the application of X meet the requirements of Subsection 3001.2(c). This opinion shall be supported by an actuarial report, subject to appropriate Actuarial Standards of Practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries. The X factors shall reflect anticipated future mortality, without recognition of mortality improvement beyond the valuation date, taking into account relevant emerging experience.

- (d) Any other table of select mortality factors adopted by the National Association of Insurance Commissioners after the effective date of this regulation and promulgated by regulation by the Commissioner for the purpose of calculating deficiency reserves.

- 3001.3 This subsection applies to both basic reserves and deficiency reserves. Any set of select mortality factors may be used only for the first segment. However, if the first segment is less than ten (10) years, the appropriate ten-year select mortality factors incorporated into the 1980 amendments to the National Association of Insurance Commissioners Standard Valuation Law may be used thereafter through the tenth policy year from the date of issue.
- 3001.4 In determining basic reserves or deficiency reserves, guaranteed gross premiums without policy fees may be used where the calculation involves the guaranteed gross premium but only if the policy fee is a level dollar amount after the first policy year. In determining deficiency reserves, policy fees may be included in guaranteed gross premiums, even if not included in the actual calculation of basic reserves.
- 3001.5 Reserves for policies that have changes to guaranteed gross premiums, guaranteed benefits, guaranteed charges, or guaranteed credits that are unilaterally made by the insurer after issue and that are effective for more than one year after the date of the change shall be the greatest of the following:
- (a) Reserves calculated ignoring the guarantee;
  - (b) Reserves assuming the guarantee was made at issue; or
  - (c) Reserves assuming that the policy was issued on the date of the guarantee.
- 3001.6 The Commissioner may require that the company document the extent of the adequacy of reserves for specified blocks, including but not limited to policies issued prior to the effective date of this regulation. This documentation may include a demonstration of the extent to which aggregation with other non-specified blocks of business is relied upon in the formation of the appointed

**DISTRICT OF COLUMBIA REGISTER**

**APR 28 2000**

- 3002.6 Basic reserves may not be less than the tabular cost of insurance for the balance of the policy year, if mean reserves are used. Basic reserves may not be less than the tabular cost of insurance for the balance of the current modal period or to the paid-to-date, if the paid-to-date is later than the current modal period. If mid-terminal reserves are used, basic reserves may not be less than the tabular cost of insurance for the balance of the current modal period or to the paid-to-date if the paid-to-date is later, but not beyond the next policy anniversary. The tabular cost of insurance shall use the same valuation mortality table and interest rates as that used for the calculation of the segmented reserves. However, if selected mortality factors are used, they shall be the ten-year select factors incorporated into the 1980 amendments of the National Association of Insurance Commissioners Standard Valuation Law. In no case may total reserves (including basic reserves, deficiency reserves and any reserves held for supplemental benefits that would expire upon contract termination) be less than the amount that the policyowner would receive (including the cash surrender value of the supplemental benefits, if any, referred to above), exclusive of any deduction for policy loans, upon termination of the policy.
- 3002.7 For any policy with an unusual pattern of guaranteed cash surrender values, the reserves actually held prior to the first unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the first unusual guaranteed cash surrender value as a pure endowment and treating the policy as an  $n$  year policy providing term insurance plus a pure endowment equal to the unusual cash surrender value, where  $n$  is the number of years from the date of issue to the date the unusual cash surrender value is scheduled.
- 3002.8 The reserves actually held subsequent to any unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the policy as an  $n$  year policy providing term insurance plus a pure endowment equal to the next unusual guaranteed cash surrender value, and treating any unusual guaranteed cash surrender value at the end of the prior segment as a net single premium, where:
- (a)  $n$  is the number of years from the date of the last unusual guaranteed cash surrender value prior to the valuation date to the earlier of:
- (1) The date of the next unusual guaranteed cash surrender value, if any, that is scheduled after the valuation date; or
- (2) The mandatory expiration date of the policy;
- (b) The net premium for a given year during the  $n$  year period is equal to the product of the net to gross ratio and the respective gross premium; and
- (c) The net to gross ratio is equal to item (1) below divided by item (2) as follows:

DISTRICT OF COLUMBIA REGISTER

APR 28 2000

ten-year select mortality factors, or any other table adopted after the effective date of this regulation by the National Association of Insurance Commissioners and promulgated by regulation by the Commissioner for this purpose.

- (e) A reinsurance agreement shall be considered yearly renewable term reinsurance for purposes of this subsection if only the mortality risk is reinsured.
- (f) If the assuming company chooses this optional exemption, the ceding company's reinsurance reserve credit shall be limited to the amount of reserve held by the assuming company for the affected policies.

3002.11 At the option of the company, the following approach for reserves for attained-age-based yearly renewable term life insurance policies may be used:

- (a) Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.
- (b) Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in § 3002.3.
- (c) Deficiency reserves shall be calculated as follows:
  - (1) For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective maximum guaranteed gross premium.
  - (2) Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with subparagraph (1) above.
- (d) For purposes of this subsection, the calculations use the maximum valuation interest rate and the 1980 CSO valuation tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this regulation by the National Association of Insurance Commissioners and promulgated by regulation by the commissioner for this purpose.
- (e) A policy shall be considered an attained-age-based yearly renewable term life insurance policy for purposes of this subsection if:
  - (1) The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are based upon the attained age of the insured such that the rate for any given policy at

APR 28 2000

a given attained age of the insured is independent of the year the policy was issued; and

(2) The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are the same as the premium rates for policies covering all insureds of the same sex, risk class, plan of insurance and attained age.

(f) For policies that become attained-age-based yearly renewable term policies after an initial period of coverage, the approach of this subsection may be used after the initial period if:

- (1) The initial period is constant for all insureds of the same sex, risk class and plan of insurance; or
- (2) The initial period runs to a common attained age for all insureds of the same sex, risk class and plan of insurance; and
- (3) After the initial period of coverage, the policy meets the conditions of paragraph (e) above.

(g) If this election is made, this approach shall be applied in determining reserves for all attained-age-based yearly renewable term life insurance policies issued on or after the effective date of this regulation.

3002.12 Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met:

- (a) The policy consists of a series of  $n$ -year periods, including the first period and all renewal periods, where  $n$  is the same for each period, except that for the final renewal period,  $n$  may be truncated or extended to reach the expiry age, provided that this final renewal period is less than 10 years and less than twice the size of the earlier  $n$ -year periods, and for each period, the premium rates on both the initial current premium scale and the guaranteed maximum premium scale are level;
- (b) The guaranteed gross premiums in all  $n$ -year periods are not less than the corresponding net premiums based upon the 1980 CSO Table with or without the ten-year select mortality factors; and
- (c) There is no cash surrender value in any policy year.

3002.13 Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met, based upon the initial current premium scale at issue:

APR 28 2000

- 3003.4 For purposes of this section, the minimum premium for any policy year is the premium that, when paid into a policy with a zero account value at the beginning of the policy year, produces a zero account value at the end of the policy year. The minimum premium calculation shall use the policy cost factors (including mortality charges, loads and expense charges) and the interest crediting rate, which are all guaranteed at issue.
- 3003.5 The one-year valuation premium means the net one-year premium based upon the original schedule of benefits for a given policy year. The one-year valuation premiums for all policy years are calculated at issue. The select mortality factors defined in §§ 3001.2(b), (c), and (d) may not be used to calculate the one-year valuation premiums.
- 3003.6 The one-year valuation premium should reflect the frequency of fund processing, as well as the distribution of deaths assumption employed in the calculation of the monthly mortality charges to the fund.
- 3003.7 Basic reserves for the secondary guarantees shall be the segmented reserves for the secondary guarantee period. In calculating the segments and the segmented reserves, the gross premiums shall be set equal to the specified premiums, if any, or otherwise to the minimum premiums, that keep the policy in force and the segments will be determined according to the contract segmentation method as defined in § 3004.
- 3003.8 Deficiency reserves, if any, for the secondary guarantees shall be calculated for the secondary guarantee period in the same manner as described in §§ 3002.2, 3002.3, 3002.4, and 3002.5 with gross premiums set equal to the specified premiums, if any, or otherwise to the minimum premiums that keep the policy in force.
- 3003.9 The minimum reserves during the secondary guarantee period are the greater of:
- (a) The basic reserves for the secondary guarantee plus the deficiency reserve, if any, for the secondary guarantees; or
  - (b) The minimum reserves required by other rules or regulations governing universal life plans.
- 3004 Definitions
- 3004.1 The definitions of terms found in D.C. Code § 35-501 *et seq.* (1997 Repl.) shall apply to this chapter. For purposes of this chapter, the following terms shall have the meanings ascribed below:

"Basic reserves" means reserves calculated in accordance with D.C. Code § 35-501 *et seq.*

APR 28 2000

However, if  $GP_{x+k+1}$  is greater than 0 and  $GP_{x+k+2}$  is equal to 0,  $G_t$  shall be deemed to be 1000. If  $GP_{x+k+1}$  and  $GP_{x+k+2}$  are both equal to 0,  $G_t$  shall be deemed to be 0.

"Deficiency reserves" means the excess, if greater than zero, of

- (a) Minimum reserves calculated in accordance with D.C. Code § 35-501 over basic reserves.

"Guaranteed gross premiums" means the premiums under a policy of life insurance that are guaranteed and determined at issue.

"Maximum valuation interest rates" means the interest rates defined in D.C. Code § 35-501 *et seq.* (Computation of Minimum Standard by Calendar Year of Issue) that are to be used in determining the minimum standard for the valuation of life insurance policies.

"1980 CSO valuation tables" means the Commissioners' 1980 Standard Ordinary Mortality Table (1980 CSO Table) without ten-year selection factors, incorporated into the 1980 amendments to the National Association of Insurance Commissioners Standard Valuation Law, and variations of the 1980 CSO Table approved by the National Association of Insurance Commissioners such as the smoker and nonsmoker versions approved in December 1983.

"Scheduled gross premium" means the smallest illustrated gross premium at issue for other than universal life insurance policies. For universal life insurance policies, scheduled gross premium means the smallest specified premium described in § 3003.3, if any, or else the minimum premium described in § 3003.4.

"Segmented reserves" means reserves, calculated using segments produced by the contract segmentation method, equal to the present value of all future guaranteed benefits less the present value of all future net premiums to the mandatory expiration of a policy, where the net premiums within each segment are a uniform percentage of the respective guaranteed gross premiums within the segment. The uniform percentage for each segment is such that, at the beginning of the segment, the present value of the net premiums within the segment equals the present value of the death benefits within the segment, plus the present value of any unusual guaranteed cash value (see § 3002.7) occurring at the end of the segment, less any unusual guaranteed cash value occurring at the start of the segment, plus for the first segment only, the excess of the item (a) over item (b), as follows:

- (a) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for in the first segment after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary within the first segment on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.
- (b) A net one-year term premium for the benefits provided for in the first policy year.

APR 28 2000

**Appendix**

**BASE SELECT MORTALITY FACTORS**

This appendix contains tables of select mortality factors that are the bases to which the respective percentages of Sections 3001.1(b), 3001.2(b) and 3001.2(c) are applied.

The six tables of select mortality factors contained herein include: (1) male aggregate, (2) male nonsmokers, (3) male smoker, (4) female aggregate, (5) female nonsmoker, and (6) female smoker.

These tables apply to both age last birthday and age nearest birthday mortality tables.

For sex-blended mortality tables, compute select mortality factors in the same proportion as the underlying mortality. For example, for the 1980 CSO-B Table, the calculated select mortality factors are eighty percent (80%) of the appropriate male table in this Appendix, plus twenty percent (20%) of the appropriate female table in this Appendix.

**DISTRICT OF COLUMBIA REGISTER**

**APR 28 2000**

The length of each segment is determined by the "contract segmentation method," as defined in this section. The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the sum of the lengths of all segments of the policy. For both basic reserves and deficiency reserves computed by the segmented method, present values shall include future benefits and net premiums in the current segment and in all subsequent segments.

"Tabular cost of insurance" means the net single premium at the beginning of a policy year for one year term insurance in the amount of the guaranteed death benefit in that policy year.

"Ten-year select factors" means the select factors adopted with the 1980 amendments to the National Association of Insurance Commissioners Standard Valuation Law.

"Unitary reserves" means the present value of all future guaranteed benefits less the present value of all future modified net premiums, where:

- (a) Guaranteed benefits and modified net premiums are considered to the mandatory expiration of the policy; and
- (b) Modified net premiums are a uniform percentage of the respective guaranteed gross premiums, where the uniform percentage is such that, at issue, the present value of the net premiums equals the present value of all death benefits and pure endowments, plus the excess of item (1) over item (2), as follows:
  - (1) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.
  - (2) A net one-year term premium for the benefits provided for in the first policy year.
  - (3) The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the length from issue to the mandatory expiration of the policy.

"Universal life insurance policy" means any individual life insurance policy under the provisions of which separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality or expense charges are made to the policy.

DISTRICT OF COLUMBIA REGISTER

APR 28 2000

"Contract segmentation method" means the method of dividing the period from issue to mandatory expiration of a policy into successive segments, with the length of each segment being defined as the period from the end of the prior segment (from policy inception, for the first segment) to the end of the latest policy year as determined below. All calculations are made using the 1980 CSO valuation tables, as defined in this section, (or any other valuation mortality table adopted by the National Association of Insurance Commissioners after the effective date of this regulation and promulgated by regulation by the commissioner for this purpose), and, if elected, the optional minimum mortality standard for deficiency reserves stipulated in § 3001.2 of this chapter.

The length of a particular contract segment shall be set equal to the minimum of the value  $t$  for which  $G_t$  is greater than  $R_t$  (if  $G_t$  never exceeds  $R_t$ , the segment length is deemed to be the number of years from the beginning of the segment to the mandatory expiration date of the policy), where  $G_t$  and  $R_t$  are defined as follows:

$$G_t = \frac{GP_{x+k+t}}{GP_{x+k+t-1}}$$

where:

$x$  = original issue age;

$k$  = the number of years from the date of issue to the beginning of the segment;

$t$  = 1, 2, ...;  $t$  is reset to 1 at the beginning of each segment;

$GP_{x+k+t-1}$  = Guaranteed gross premium per thousand of face amount for year  $t$  of the segment, ignoring policy fees only if level for the premium paying period of the policy.

$R_t = \frac{q_{x+k+t}}{q_{x+k+t-1}}$  However,  $R_t$  may be increased or decreased by one percent in any policy year, at the company's option, but  $R_t$  shall not be less than one;

where:

$x$ ,  $k$  and  $t$  are as defined above, and

$q_{x+k+t-1}$  = valuation mortality rate for deficiency reserves in policy year  $k+t$  but using the mortality of § 3001.2(b) if § 3001.2(c) is elected for deficiency reserves.

APR 28 2000

- (a) The insured is age twenty-four (24) or younger;
  - (b) Until the insured reaches the end of the juvenile period, which must occur at or before age twenty-five (25), the gross premiums and death benefits are level, and there are no cash surrender values; and
  - (c) After the end of the juvenile period, gross premiums are level for the remainder of the premium paying period, and death benefits are level for the remainder of the life of the policy.
- 3003      Calculation of Minimum Valuation Standard for Flexible Premium and Fixed Premium Universal Life Insurance Policies That Contain Provisions Resulting in the Ability of a Policyowner to Keep a Policy in Force Over a Secondary Guarantee Period**
- 3003.1      Policies with a secondary guarantee include:**
- (a) A policy with a guarantee that the policy will remain in force at the original schedule of benefits, subject only to the payment of specified premiums;
  - (b) A policy in which the minimum premium at any duration is less than the corresponding one year valuation premium, calculated using the maximum valuation interest rate and the 1980 CSO valuation tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this regulation by the National Association of Insurance Commissioners and promulgated by regulation by the commissioner for this purpose; or
  - (c) A policy with any combination of subparagraph (a) and (b) above.
- 3003.2      A secondary guarantee period is the period for which the policy is guaranteed to remain in force subject only to a secondary guarantee. When a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees. Secondary guarantees that are unilaterally changed by the insurer after issue shall be considered to have been made at issue. Reserves described in §§ 3003.7 and 3003.8 below shall be recalculated from issue to reflect these changes.**
- 3003.3      Specified premiums mean the premiums specified in the policy, the payment of which guarantees that the policy will remain in force at the original schedule of benefits, but which otherwise would be insufficient to keep the policy in force in the absence of the guarantee if maximum mortality and expense charges and minimum interest credits were made and any applicable surrender charges were assessed.**

APR 28 2000

a given attained age of the insured is independent of the year the policy was issued; and

(2) The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are the same as the premium rates for policies covering all insureds of the same sex, risk class, plan of insurance and attained age.

(f) For policies that become attained-age-based yearly renewable term policies after an initial period of coverage, the approach of this subsection may be used after the initial period if:

- (1) The initial period is constant for all insureds of the same sex, risk class and plan of insurance; or
- (2) The initial period runs to a common attained age for all insureds of the same sex, risk class and plan of insurance; and
- (3) After the initial period of coverage, the policy meets the conditions of paragraph (e) above.

(g) If this election is made, this approach shall be applied in determining reserves for all attained-age-based yearly renewable term life insurance policies issued on or after the effective date of this regulation.

3002.12 Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met:

- (a) The policy consists of a series of  $n$ -year periods, including the first period and all renewal periods, where  $n$  is the same for each period, except that for the final renewal period,  $n$  may be truncated or extended to reach the expiry age, provided that this final renewal period is less than 10 years and less than twice the size of the earlier  $n$ -year periods, and for each period, the premium rates on both the initial current premium scale and the guaranteed maximum premium scale are level;
- (b) The guaranteed gross premiums in all  $n$ -year periods are not less than the corresponding net premiums based upon the 1980 CSO Table with or without the ten-year select mortality factors; and
- (c) There is no cash surrender value in any policy year.

3002.13 Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met, based upon the initial current premium scale at issue:

APR 28 2000

- (1) The present value, at the beginning of the  $n$  year period, of death benefits payable during the  $n$  year period plus the present value, at the beginning of the  $n$  year period, of the next unusual guaranteed cash surrender value, if any, minus the amount of the last unusual guaranteed cash surrender value, if any, scheduled at the beginning of the  $n$  year period.
- (2) The present value, at the beginning of the  $n$  year period, of the scheduled gross premiums payable during the  $n$  year period.
- 3002.9 For purposes of this subsection, a policy is considered to have an unusual pattern of guaranteed cash surrender values if any future guaranteed cash surrender value exceeds the prior year's guaranteed cash surrender value by more than the sum of:
- (a) One hundred ten percent (110%) of the scheduled gross premium for that year;
- (b) One hundred ten percent (110%) of one year's accrued interest on the sum of the prior year's guaranteed cash surrender value and the scheduled gross premium using the nonforfeiture interest rate used for calculating policy guaranteed cash surrender values; and
- (c) Five percent (5%) of the first policy year surrender charge, if any.
- 3002.10 At the option of the company, the following approach for reserves on yearly renewable term reinsurance is applicable:
- (a) Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.
- (b) Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in § 3002.3.
- (c) Deficiency reserves shall be calculated as follows:
- (1) For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective maximum guaranteed gross premium.
- (2) Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with subparagraph (1) above.
- (d) For purposes of this subsection, the calculations use the maximum valuation interest rate and the 1980 CSO mortality tables with or without

APR 28 2000

actuary opinion pursuant to and consistent with the requirements of D.C. Code § 35-501.

- 3002 Calculation of Minimum Valuation Standard for Policies with Guaranteed Nonlevel Gross Premiums or Guaranteed Nonlevel Benefits (Other than Universal Life Policies)**
- 3002.1 Basic reserves shall be calculated as the greater of the segmented reserves and the unitary reserves. Both the segmented reserves and the unitary reserves for any policy shall use the same valuation mortality table and selection factors. At the option of the insurer, in calculating segmented reserves and net premiums, either of the adjustments described in paragraph (a) or (b) below may be made:
- (a) Treat the unitary reserve, if greater than zero, applicable at the end of each segment as a pure endowment and subtract the unitary reserve, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.
  - (b) Treat the guaranteed cash surrender value, if greater than zero, applicable at the end of each segment as a pure endowment and subtract the guaranteed cash surrender value, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.
- 3002.2 The deficiency reserve at any duration shall be calculated on a unitary basis if the corresponding basic reserve determined by § 3002.1 is unitary, on a segmented basis if the corresponding basic reserve determined by § 3002.1 is segmented, or on the segmented basis if the corresponding basic reserve determined by § 3002.1 is equal to both the segmented reserve and the unitary reserve.
- 3002.3 Subsection 3002.3 shall apply to any policy for which the guaranteed gross premium at any duration is less than the corresponding modified net premium calculated by the method used in determining the basic reserves, but using the minimum valuation standards of mortality (specified in § 3001.2) and rate of interest.
- 3002.4 Deficiency reserves, if any, shall be calculated for each policy as the excess if greater than zero, for the current and all remaining periods, of the quantity A over the basic reserve, where A is obtained as indicated in § 3001.2.
- 3002.5 For deficiency reserves determined on a segmented basis, the quantity A is determined using segment lengths equal to those determined for segmented basic reserves.

DISTRICT OF COLUMBIA REGISTER

APR 28 2000

- (2) X shall not be less than twenty percent (20%);
- (3) X shall not decrease in any successive policy years;
- (4) X is such that, when using the valuation interest rate used for basic reserves, item (A), as set forth below, is greater than or equal to Item (B):
  - (A) The actuarial present value of future death benefits, calculated using mortality rates resulting from the application of X, or,
  - (B) The actuarial present value of future death benefits calculated using anticipated mortality experience without recognition of mortality improvement beyond the valuation date;
- (5) X is such that the mortality rates resulting from the application of X are at least as great as the anticipated mortality experience, without recognition of mortality improvement beyond the valuation date, in each of the first five (5) years after the valuation date;
- (6) The appointed actuary shall increase X at any valuation date where it is necessary to continue to meet all the requirements of Subsection 3001.2(c);
- (7) The appointed actuary may decrease X at any valuation date as long as X does not decrease any successive policy years and as long as it continues to meet all the requirements of Subsection 3001.2(c);
- (8) The appointed actuary shall specifically take into account the adverse effect on expected mortality and lapsation of any anticipated or actual increase in gross premiums; and
- (9) If X is less than 100 percent at any duration for any policy, the following requirements shall be met:
  - (A) The appointed actuary shall annually prepare an actuarial opinion and memorandum for the company in conformance with the requirements of D.C. Code § 35-501; and
  - (B) The appointed actuary shall annually opine for all policies subject to this regulation as to whether the mortality rates

APR 28 2000

This regulation also shall not apply to subsequent policies issued as a result of the exercise of such a provision, or a derivation of the provision, in the new policy.

- (b) Any universal life policy that meets all the following requirements:
  - 1) The secondary guarantee period, if any, is five (5) years or less;
  - 2) The specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables as defined in subsection 3004 and the applicable valuation interest rate; and
  - 3) The initial surrender charge is not less than 100 percent of the first year annualized specified premium for the secondary guarantee period.
- (c) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.
- (d) Any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.
- (e) A group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year.

3000.3 The following conditions shall apply with respect to insurance policies affected by these regulations:

- (a) Calculation of the minimum valuation standard for policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits (other than universal life policies), or both, shall be in accordance with the provisions of section 3002.
- (b) Calculation of the minimum valuation standard for flexible premium and fixed premium universal life insurance policies, that contain provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period shall be in accordance with the provisions of section 3003.
